📄 PhonePe Analysis Dashboard Project Report

🟣 1. 🧾 Introduction

📊 This project focuses on analyzing digital transaction data using **Power BI**.

🎯 **Objective:**

- To analyze transaction trends
- To understand user growth
- To identify top-performing states
- To visualize data using interactive dashboards

🟣 2. 📁 Dataset Description

📂 The dataset contains:

- 🗺️ **States & Districts**
- 📅 **Year & Quarter**
- 💳 **Transaction Type**
- 👥 **User Count**
- 💰 **Transaction Amount**

📌 Data is divided into:

- Aggregated Transactions

- Aggregated Users
- Map-based Data

🟣 3. 🛠️ Tools Used

- 🟡 **Power BI**
- 📊 Excel (for initial data check)
- 🧮 DAX (Data Analysis Expressions)

🟣 4. 🔗 Data Modeling (Star Schema)

📍 Created relationships between tables using:

- 🔑 `states`
- 📅 `year`
- 🧩 `quarter`

👉 Ensured proper filtering across visuals

🟣 5. 🧮 DAX Calculations

📌 Total Amount

```
Total Amount = SUM(aggregated_transaction[Transaction_amount])
```

📌 Total Transactions

```
Total Transaction = SUM(aggregated_transaction[transaction_counts])
```

📌 Total Users

```
Total Users = SUM(aggregated_user[registered_user])
```

📌 Avg Transaction Value

```
Avg Transaction = [Total Amount] / [Total Transaction]
```

📌 YoY Growth %

```
YoY Growth =
VAR CurrentYear = MAX(aggregated_transaction[year])
VAR PrevYear = CurrentYear - 1

VAR CurrentValue =
    CALCULATE([Total Amount], aggregated_transaction[year] = CurrentYear)

VAR PrevValue =
    CALCULATE([Total Amount], aggregated_transaction[year] = PrevYear)

RETURN
IF(
    NOT ISBLANK(PrevValue),
    DIVIDE(CurrentValue - PrevValue, PrevValue),
    0
)
```

🟣 6. 📊 Dashboard Design

🔝 KPI Section

- 💰 Total Amount
- 🔢 Total Transactions
- 👥 Total Users
- 📈 YoY Growth
- 💡 Avg Transaction

🗺️ Map Visual

- State-wise transaction distribution
- Bubble size = Amount

📊 Charts Used

- 📊 Bar Chart → Top States
- 🍩 Donut Chart → Transaction Type
- 📈 Line Chart → Growth Trend

🎛️ Filters (Slicers)

- 📅 Year
- 🧩 Quarter
- 🗺️ State
- 🏙️ District
- 💳 Transaction Type

🟣 7. ✅ Solutions Implemented

✔ Used DAX for YoY correction
✔ Removed blank values
✔ Used range slicer instead of exact amount
✔ Fixed sorting (Year & Quarter)

🟣 8. 📌 Key Insights

📊 **Major Findings:**

- 🚀 ~85% YoY growth observed

- 🏆 Telangana, Maharashtra lead transactions
- 💳 Merchant payments dominate (~80%)
- 📈 Strong growth after 2020
- 👥 User growth drives transactions

🟣 9. 🏁 Conclusion

📌 The dashboard successfully provides:

- Clear business insights
- Interactive filtering
- Data-driven decision support

🎯 This project demonstrates strong skills in:

- Data visualization
- DAX calculations
- Problem-solving
